

TEN EASY STEPS FOR INSTALLATION OF POOL LINERS

Step 1

Install the water pipes and water inlets and outlets that are special for Vinyl liners. Drill holes on the floor or walls of the pool if they are needed.

Step 2

Sweep and Vacuum the pool and make the floor and walls smooth. If it is an indoor pool and there are lights to be installed on the ceiling, make sure such work is done before the installation of pool liners to avoid damage to the liners.

Step 3

Fix the PVC coated metals to the top of the walls with polyurethane glue and rivets.

Step 4

Cut the liners to fit the pool size.
Unfold the liners on the floor, trying to avoid wrinkles.

Step 5

Apply some glue on the floor and the back of the liner.

Step 6

The overlap between the liners must be at least 5cm.

Weld like drawing a dotted line the first time and
like drawing a solid line the second time.

Step 7

Edge processing shall be different according to the structure of the pool.

Step 8

Check if the welding job is done well. If there is no problem, apply the liquid pvc to the seams.

Step 9

Put some water into the pool to test whether there is a leak.

Step 10 Remarks

The waterline of vinyl liner pool should be cleaned regularly every month. You can use a special PVC liner detergent.
